A New
ALMANACK

And Prognostication for the
Year of our Lord God,

1656.

Being Bissextile, or Leap-year.

Wherein is shewed the natural in-
clination of the air, and Judgement
of the weather, according to the Aspects
of the Planets, and positions
of the Stars.

With other Rules, Tables, and Directions,
Convenient in such a work to be noted.

By William White.

Calculated for the Meridian of *Todington*
in *Bedford shire*, Where the Pole is Elevated
52 Degrees and 8 Minutes.

LONDON,

Printed by Robert White for
the Company of Stationers. 1656

May	11	Rogation Sunday	May	3
May	15	Ascension day	May	7
May	25	Whit Sunday	May	17

A brief Description of the particular things contained in this Almanack.

IN the Almanack are 8 Rows or Columns in each month ; The first is the number of days ; the second, the days of the Week ; in the third are the Festival days, and other both fixe and moveable ; the beginning and ending of the Terms, with the change of the air ; the 4 is the Age of the Moon ; the 5 is the motion of the moon (or the Signs, as we call it through the Zodiack) the sixt is the New, Full, and Quarters of the Moon ; the 7 is the time of high water at London Bridge.

As for example, the 24 of January, being Thursday, the Moon is 8 days old, and the sign is in the neck, and that day is high-water at London Bridge, 24 minutes past 9 at night.

The glorious Planet Venus is our bright morning Star, all this year to the 2 day of September, and from thence to the 24 day of June the next year, 1657. She is occidental, or our bright evening Star, shining very bright in the evening after the setting of the Sun.

January hath xxxi dayes:

Warm Meats, thick cloaths, This Moneth are good;
No Phisick, Baths, or letting blood.

1 Day sun riseth at 8 and 3 min. sets at 3 and 57 min.
15 Day sun riseth at 7 and 44 min. sets at 4 and 16 min.

A Geographical epitomie of the Map of England and WALES, wherein is shewed how each Shire is bounded and joyned to each other, and what Point of the Compass every County lyeth from the Honourable City of London; (being lately published) the use of which, and the next Table, is explained, on the backside of the other Leaf.

You may read (after the next leaf) the whole compass, length, and breadth of England and Wales, with the chief Islands of note belonging to the same: Also the compass, length, and breadth of Ireland. But for Scotland, it is hard to be measured, the Islands being so many, barren and scattered, being above 300.

An alphabetically Catalogue of all the Shires, Cities, Market-Towns, Castles, Parishes, Rivers, and Parks, in every particular Shire in England and Wales; with the distance of miles, and points of the compass from London.

Shires and Countries.	Miles.	Points of the Compass.	Dist.	Market Towns.	Capit.	St.	Arms.	Popul.

The Explanation & Vse of the former Map & Table

First for the Map: The figures in each shire of the map are to shew you the names of every County, & the Letters in the same are for uses, as I will shew hereunder.

You must understand that London is in Middlesex, which County of Middlesex hath the figures of 22 in it, & the little black speck. & 2 spot therein signifieth London. Now if you would readily find the name of any Shire therein, and how many miles the middle of the said County (in a straight line) is from London, & what point of the Compass it lyeth from the said City; resort then to the Table of Shires on the other side, and it will resolve you.

As for example, Barkshire it hath the figure of 1 in the map, & so it hath likewise in the Table; where is shewed that the middle or heart of that Shire is 40 miles from London in a straight line, & it lyeth full west from the City, and looking forward toward the right-hand, it sheweth it hath no City, 11 Markets-Towns, 2 Castles, 140 Parishes, 3 Rivers, & 17 Parks. Again, Buckinghamshire hath the figure of 3 in the Map, & so it hath before it in the Table, the heart or middle of which shire is from London 35 miles, & lyeth North-east & by west from the said City, it hath no City, 11 Markets-Towns, no Castle, 185 Parishes, 2 Rivers, and 15 Parks, and so of the rest.

The use of the Letters in the Map is this, S for Scotland, I part of Ireland, F part of France, M the Isle of Man, W the Isle of Wight, L the Lizard point, H Holy land, the * the Irish Sea, B the British or English Sea, G the German Sea, Ba Barwick, D Dover, N Newcastle, C the points of the Compass, & the Scale of Miles, by which you may measure the distance of any place, for every black degree is five miles, so is every white.

The 39 Shires from Berkshire to Yorkshire are the English Shires, & the other 13 from Anglesey, to Radnorshire are Welsh.

It may be somewhat further in Miles to the middle of each shire, by reason of the crookedness of the Highways, Hills, and valleys, but what is here set down is meant in a straight line from London, as is said.

The Compass, Length and Breadth of England, and the chiefe Ilands thereof.

England is in compasse _____ 1532. miles
 The greatest length thereof Northwards and South-
 wards, from Barwick to the Lands end, is _____ 386. miles.
 The shortest length from Barwick to Calshot Castle in
 Hampshire, is _____ 186. miles.
 The broadest place from the Lands end to Sandwich,
 is _____ 179. miles.
 from S. Davids in the West in Pembroke-shire, through
 the midst of Worcester and Warwick-shire Eastward to
 Yarmouth in Norfolk, is _____ 240. miles.

The Ile of M A N.

The Ile of Man is in compasse _____ 91. miles.
 The length is _____ 28. miles.
 The breadth is _____ 18. miles.

The Ile of A N G L E S E A.

The Ile of Anglesea is in compasse _____ 85. miles.
 The length is _____ 21. miles.
 The breadth is _____ 18. miles.

The Ile of W I G H T.

The Ile of Wight is in compasse _____ 57. miles.
 The length is _____ 22. miles.
 The breadth is _____ 11. miles.

The Compass, Length, and Breadth of I R E L A N D.

Ireland, respecting the adjacent Ilands, and some Inlands,
 is in compasse _____ 948. miles.
 The length North and South, is _____ 303. miles.
 The breadth East and West, is _____ 113. miles.

Since the States Government. 7. years, Ianua. 30.

A Prognostication;

The use of the Table of Kings.

This table of the Kings, I suppose may be necessary in the searching out the antiquity of many old evidences, which are dated many times by the years of the Kings then reigning, and not by the years of our Lord.

Example.

How long is it since the 10 year of King James:

which is thus found.

King James began to reign Anno Domini 1602
to which add the 10 years

So it is Anno Domini	10	
which subtracted from	1612	
the present year	1698	
there remains the years since.		A

How to judge what Weather will follow, by the rising and setting of the Sunne.

The Sun rising bright & clear, signifieth a pleasant day: If he rise fiery red, it promisseth rain: If in his rising he be thinly overcast with a cloud, it betokeneth foul weather: If the sun drive the clouds before him in the West, it signifieth fair weather. If in his rising there appear a circle about him, & hanthly with a day equally, it betokeneth fair weather. Also if he set fiery red, it signifieth fair weather: If at his setting he be of divers colours, or cloudlike water, it threatneth rain. If at the rising of the Sun, his beams seem red, or long, or encompassed with red clouds it signifieth great winds: If at his rising there appear a thick mist, or if it raineth in the evening, it threatneth very foul weather to follow. Also if the Sun beams be spotted: if he be green, pale, or black, or ga he red to a cloud, it signifieth rain. The Sun setting clear without any cloud, signifieth a fair night to ensue. If the

circle, or circles about the Sun be clear, & at no continuance, look for fair weather: If there be many circles, it signifieth winds: the redder they are, the more belement winds. If the circles are here & there broken, & are thick & black, look for cold wind at hand: or if he settle behind, a great black cloud, rain follows.

How Weather is foreknown by the Moon

If the Moon in the third day of her change, or dayes before her full, or in the midst of the quarter, be found of pure light, nothing compassing her, the ends direct up, she promisseth faire weather: but if to red colour, & proboketh winds. The Moon pale, or somewhat black or thick, threatheneth rain. When the Moon is five dayes old, mark the tips of her horns: if they be blunt, it signifieth rain: if sharp, & pricking upwards, great winds. If in the fourth day after her change, she have a red circle about her, it signifieth winds and rain.

Of the judgment of Weather by the Stars

If the Stars appear of much light, and seeme to be of more bignesse and blazing then ordinary, it sheweth great windes and moisture in the ayre where they seeme so; and in Winter, great frost. When dim Stars appear with long fiery tails, it threatheneth winds, and great drought: the more number, the greater will be the effect. If any Starres seeme to shoot or fall, it signifieth great winds in that place: If they seeme to shoot in many places, it signifieth diverse windes. If in all places, windes, thunder, lightning, and most tempestuous weather.

How to judge of the weather by the Clouds

Black clouds flying from the east, sheweth draine at night, if from the west, rain the next day; if they lye low, and appeare to settle upon the tops of hills, it is a signe of cold weather, if they

be full charged, and appear white like towers, hall is at hand: if white clouds appear in winter, two or three days together at sun rising, it is a signe of cold and snow, but black clouds signifie rain. A red sky in the evening, and a gray morning is a signe of a fair day. Whisks falling in the morning, in spring or harvest, also mists ober ponds or waters in the morning betoken rain. If the clouds fly swiftly in the ayre, it signifieth rain from that part of the heavens, especially from the north or south. If thick white clouds gathered together in many places like flocks, or heaps of wool appear in many places, it is a signe of rain: but if thick dark clouds towards the north or west nax the earth, presently rain, and if like hills a little above the earth, foul weather is ober. If mists descend from the hills, and settle in the valleys, it is a signe of fair hot weather next day, or if white mists arise from the waters in the evening.

How to judge of the weather by the Rain-bow.

The natural signification of the Rain-bow, is to shew rain either past or to come. The Rain-bow appearing when it is fair, is a signe of foul weather: when it is foul it is appear, it is a signe of fair weather, the greater it appears the more rain, the redder the more wind; if before noon, then the rain is spent; if the rain-bow appear about one or two in the afternoon, then rain is near. A rainbow in the morning is a signe of wet (unless there be drought in the air) if it appear in the evening it is a signe of fair weather (unless the air abound with moisture.) A rain-bow a night opposite to the moon, is a signe of much small rain and wind to follow. A rain-bow after long rain is a signe of fair weather presently; if two rainbows appear together, it is a signe of rain within one or two days after.

This Table shews what makes an high tide at the sea
and Full, and also the difference of the Tides in these pla-
ces from the Tides at London Bridge: therefore if you
add this difference of any place to the time of high Tide
at London any day (as it is set down in the Almanack)
so you shall have the true time of the Tide in any of these
places. Note if your sum exceed twelve hours, to count
only the overplus.

Of the Eclipses of the Sun and Moon, this present year 1656.

Five times this year will the two Luminaries the Sun and the Moon be Eclipsed, (that is to say) twice the Sun, and thrice the Moon, but we in England, shall onely see the two former;

The first Eclipse is of the Moon upon the first day of January, in the Evening. The beginning 49 minutes past 6 at night, and is in her greatest obscuration 21 minutes past 8 the end of this Eclipse 53 minutes past 9. so that the totall duration of this Eclipse from the beginning to the end, is 3 hours and 3 minutes.

The second is an Eclipse of the Sun upon Wednesday the 16 day of January, and beginneth 48 minutes past 12 at noon, the middle of greatest obscuration at 37 minutes past 1 in the afternoon, and the end of this Eclipse will be 8 minutes past 3 in the afternoon, the digits eclipsed are 8 and 50 minutes on the north part of his body.

The third is a totall Eclipse of the Moon, upon the 16 day of June which will be seen in India, Syria, Arabia, China, Lapland, in the Islands Sumatra, both the Iava's, and in the Philippine Island.

The fourth Eclipse is of the Sun upon the 11 day of July in the Evening, which will appear totall in the Southern parts of the earth in the pacifick Sea, and in the Straights of Magellanica.

The fifth and last Eclipse is of the Moon upon the 11 day of December at 10 hours A M. It is a very great Eclipse, and will shew it self to our Antipodes, and to such people as dwell in California, the Gulf of Mexico, new Spain, Granada, Barbados, in the Islands Los mongos, Laveniza, &c.

The

A Prognostication.

The Explanation of a new and easie KALENDER here following, for this present Year, 1656.

NOte that every Month containeth three Rows of Columns (the Figures for the number of Dates excepted) The first Column toward the left hand containeth the Week Daves and Sunday Letters; the second the Sign wherein the Moon is every day. And the third the Changes & Quarters of the Moon. Note that the being thus figured, both signify the New Moon; & placed thus ways is the first Quarter & this the Full Moon; and again thus the last Quarter. Note also that the Figures above the head of the Moon, doe signify the howe of her Change, Full, & Quarters, and the Letters above or beneath the time after noon, or after midnight, N standing for Afternoon till Midnight, and M for after Midnight till Noone.

As for example, against the 16 day of January, being Wednesday I doe find the Moon (or Sign) in ♊ Aquarius, of the legs, and is thus O charactered, which is the change of the Moon at one in the afternoon. Again, on March 23 being Sunday, I doe find the Moon in ♋ Cancer of the breast, and is thus I charactered, which is the first Quarter at 10 in the forenoon; and so of the rest.

Note also, that at the head of every month is placed the rising and setting of the Sun for the midst of every month. As for example, for the midst of January, the \odot riseth at 7, of the clock and 44 minutes; and setteth at 4, and 11 minutes, &c.

It also containeth (on the back side of the Leaf) for every month the Feastes both Moveable and Fixt, with the beginning and ending of every Terme. As Twelfth day is on the 6. of January, Easter day is on the 6. of April, Whit Sunday is on the 25 of May Terme begins on the 11 of April, and endeth on the 12 of May, &c.

A briete and easie Almanack for this Year
 1656. which being cut out, is necessary to be
 placed into any Book of Accompts, Table-book,
 or other, conteyning the whole Kalender, in
 a short method: By *William Clibb.*
